

INELCO wishes everyone a blessed and happy 2017!!

The year 2016 was the most successful in our short company history, with a growth in sales and investments above average. The impact of this will take effect in 2017. We would like to thank all our partners for the fruitful cooperation.

electronica gleanings:

We would like to thank all our partners who supported us to make the exhibition successfully for us. Over all, the electronica 2016 in Munich was a complete success. The partners we wanted to meet were all there. In general, it must be said that the downtrend seems to go on, especially by visitors and competitors, who haven't exhibited any more. The question of importance of the electronica exhibition for our industry must be observed and to what extent such a format is still of interest.

A Christmas story

It is December 24th, 2015 in the morning, Internet of Things is used worldwide. The iWatch wakes you up and explains what you have to do until Santa is coming in the evening. After you followed all instructions of the iWatch, Zalando gives instructions on what to wear. In the food compartment of the refrigerator you will find your most famous breakfast and the coffee machine already finished the latte macchiato. After you read and answer approximately 500 electronic messages, the iPhone is using AmexFood to select the restaurant for lunch and order and pay your meal, based on the existing data. The Tesla is fully automatic driven and takes you there. After the meal you are returning home with your car. Meanwhile, the Miele fully automatic vacuum cleaner did his work and ASIMO cleaned up the house. Apple TV now shows automatically all the movies you like. The kitchen machine Thermomix TM4000 from Vorwerk received the Christmas turkey from the refrigerator some hours ago. The food is almost finished. The sky darkens, Amazon's mega-zeppelins, which look like WW1 bombers, are slowly moving into position. Christmas already started and the monitors in your house switch on. Via Vodafone Video Family Call, the family is brought together and everybody wish you all the best. In that moment, like Star Wars, millions of drones in Christmas colors start from the zeppelins and distribute the Christmas gifts. After you thanked to all the videoconference participants for the gifts you take your dinner. It is so nice to celebrate Christmas with the whole family. ASIMO has now put on a red jelly bag cap and sings along with the other house devices the iTunes Xmas-hits. Isn't it a beautiful Christmas! Let's see how it will be next year when IoT version 2026 includes the virtual Christmas market with Odorama.

INELCO's premium plug series completed

INELCO's RJ45 premium plug series with AAT (ADVANCED ALIGNMENT TECHNOLOGY) for industrial and high speed data applications. e.g. CAT6A, 10 Gbps and 40Gbps was now completed.

RJ45 (PiP) Pin-in-Paste Jack Series

The RJ45 jack with shortened contacts for pin-in-paste technology makes it possible to use efficient manufacturing processes. This allows pick & place robots Tape & Reel packaged SMT (Surface Mount Technology) and PiP components to be installed in the same process and IR reflow soldering.

Factory holidays for Chinese New Year

Our China factory is closed from Jan. 1st until Feb. 5th. We estimate limited production in the week before and back to full capacity about 2 weeks after CNY.

Warehouse:

In order to increase the service for the premium plug series, Inelco was expanded in Germany by a warehouse for standard products.

In addition, a test workstation is set up in order to be able to carry out its own measurements to be faster than using test laboratory in the factory only.

USB 3.1c

INELCO's new USB 3.1 C series provides a reversible connector alignment and supports scalable power supplies. USB 3.1 signaling supports a data rate of up to 15 Gbit/s. INELCO's USB series includes various types of plugs and sockets.
